

CC1170 Filling and Semi Automatic Cap Tightening Machine

Cap Coder Ltd enjoys an excellent reputation in various sectors of the Packaging Industry, including pharmaceutical, cosmetic, adhesive, aromatherapy, diagnostic, household goods & food industry. Cap Coder works together with its customers to Design, Build and Develop Machines that convey, fill, plug, cap, orientate and code containers to suit the application required.

The **CC1170** machine is a self-contained, stand alone, filling and cap tightening machine, supplied with a rotary table for the automatic infeed of containers. It is provided with lockable castors making it easily moveable between work areas. It is generally supplied with Cap Coder's own *Alphafill* peristaltic pump dispenser as the preferred filler.

Cap	Cap Shape	Any shape considered.
	Cap Type	Plastic, metal
	Cap Size	Ø10mm - Ø60mm
	Cap Application	Torque & speed controllable
Container	Container Shape	Round/oval
	Container Volume	10ml - 200ml (dependent on container diameter)
	Container Height	Up to 200mm
Control	PLC	Schneider as standard. Client preference as required.
Electrical	Servo Drives	Dunkermotoren, Schneider
	Electrical Controls	Schneider, Pilz, Keyence
	Electrical Supply	230v Single phase – 13Amp via MCB “D” rated. Not via RCD supply
	Electrical Consumption	Max 0.5kw
Pneumatic	Pneumatic Systems	SMC as standard
	Air Pressure	5 bar
	Air Consumption	Notionally 10 Litre/min
Construction	Dimensions	775mm(w) x 1220mm(d) x 1640mm(h)
	Weight	140kg
	Build Standard	EC Declaration of Conformity. Zone 2 Compatible if operationally required. IP 65 rated.
	Machine Construction	Anodised aluminium extrusion framework, stainless steel base cover panels, polycarbonate guarding, HDPE plastic rotary table included
Options	Additional Options	Press head, alternative filling machine.
	Change Parts	Starwheels, torque head gripping jaws, clamps & fences, press pads
Production Rate		Up to 30 per minute, dependent upon fill volume
